## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ammonium Polyphosphate market for 2018-2023.

Ammonium Polyphosphate (APP) are a class of ammonium salts. The physical properties of this class of chemicals vary as a function of the degree of phosphate condensation. Short-chain APP is water soluble, while longer chain APP has lower water solubility.

Ammonium polyphosphate (APP) usually has two types, such as APP I and APP II. They differ from their polymerization degree. Polymerization degree of APP I is generally lower than 100, while that of APP II is higher than 1000. APP II has lower water solubility than APP I. So, APP II is also used in flame retardant industry and APP I is used in liquid fertilizer industry. Affected by the policy, ammonium polyphosphate (APP) application share used in flame retardant industry will increase in the coming few years.

Currently, manufacturers of ammonium polyphosphate (APP) mainly concentrate in North America, Europe and China. Due to the technical barriers of APP II, APP I production is higher than that of APP II. Global main manufacturers are Clariant, ICL, Agrium and Changfeng Chemical, etc. During all regions, Europe ammonium polyphosphate (APP) production share is biggest and it was 36.58% in 2015. North America and China ammonium polyphosphate (APP) production share was separately 30.36% and 31.92% in 2015.

Over the next five years, LPI(LP Information) projects that Ammonium Polyphosphate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$

xx million in 2017.
