The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ammonium Sulfate market for 2018-2023. Ammonium sulfate (IUPAC-recommended spelling; also ammonium sulphate in British English), $(\text{NH}_4)_2\text{SO}_4$, is an inorganic salt with a number of commercial uses. The most common use is as a soil fertilizer. It contains 21% nitrogen and 24% sulfur.

The global market for ammonium sulfate is highly dependent on a number of factors such as the fertilizer industry and the stringent environmental regulations related to it. However, as a major portion of ammonium sulfate is manufactured involuntarily as a co-product or by-product, its volume of production is influenced more by the general industrial output than by the demand for fertilizers. Moreover, as ammonium sulfate is a by-product of caprolactum, the market is highly affected by developments in the caprolactum market. With the growing production of caprolactum in Asia Pacific, potential for interference in the ammonium sulfate industry is anticipated to be significant over the next few years. The global demand for ammonium sulfate is expected to increase in areas with rising sulfur-deficient soils, especially in areas with tight environmental controls such as North America.

For the China ammonium sulfate market, the capacity utilization is relatively high. In recent years, lots of manufacturers came into the caprolactam industries, leading to a rapid growth in the caprolactam grade ammonium sulfate production. And for now, the Chian has been the biggest ammonium sulfate export contry in the world. In the future, searching for the other downstream products application of ammonium sulfate is becoming more and more importan for the continuous growth of the market. Government will roll out relevant support and incentives for ammonium sulfate industry.

These policies will better standardize the market and build a healthy ammonium sulfate industry. However, if the national macro economy begins to tighten, the enterprise is reducing investment or domestic inflation is severe, the overall demand for ammonium sulfate will be adversely affected.

Over the next five years, LPI(LP Information) projects that Ammonium Sulfate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
