In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ammonium Thiosulfate Fertilizer market for 2018-2023.

Ammonium thiosulfate fertilizer (ATF) is the most widely used fluid fertilizer that contains sulfur; it is composed of sulfur dioxide, elemental sulfur, and aqueous ammonia. It is widely used in the fluid fertilizer industry to make a wide range of N-P-K-S fertilizers. However, it is not compatible with acidic solutions, and not with anhydrous ammonia. And it decomposes in the soil to form equal amount of sulfate, suitable to the S uptake patterns for most crops.

As for the region consumption, North America remained the largest market for ammonium thiosulfate in the world, with 56.33% market share consumption in 2015. Other major consuming regions include Europe and South America, which account for 27.87% and 9.42% respectively. The trading of ammonium thiosulfate is not frequent, though ammonium thiosulfate can be detected to be transformed from North America to South America. High price and transportation fee, and lacking awareness of sulfur fertilizer might be the main reason for the situation. As the development of ammonium thiosulfate in global regions, the market would be expanded greatly.

Fertilizer is the largest application of ammonium thiosulfate. Ammonium Thiosulfate is an excellent source of ammoniacal nitrogen that is quickly absorbed by the plant, which contains 12% nitrogen and 26% sulfur. Corn and grain are the most popular crops that use Ammonium thiosulfate fertilizer.

Over the next five years, LPI(LP Information) projects that Ammonium Thiosulfate Fertilizer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023,

from US\$ xx million in 2017.
