In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Amorphous Polyalphaolefin market for 2018-2023.

An amorphous a-olefin copolymer, commonly referred to as APAO (Amorphous polyalpha olefin), is a random copolymer obtained by polymerization of a-olefins and belongs to a plastomer material.

Because of its low molecular weight and high degree of randomness, APAO can exhibit different properties of isotactic polyolefins and can be applied to different applications. APAO's aliases are: amorphous polyolefins, also known in some regions as APOs, amorphous polyalphaolefins, or APP resins.

This product has been widely used in asphalt modification, hot melt and pressure sensitive adhesives, sealing materials due to its excellent low temperature, high temperature performance, water resistance, anti-oxidation and UV resistance, and good miscibility with organic phase. Waterproof materials, plastic masterbatches, car mats, tile carpets, packaging, cable filling, paper coating and other fields.

Over the next five years, LPI(LP Information) projects that Amorphous Polyalphaolefin will register a 6.0% CAGR in terms of revenue, reach US\$ 510 million by 2023, from US\$ 360 million in 2017.
