In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Anthracite Coal market for 2018-2023.

Anthracite coal, commonly known as hard coal or called Anthracite, has the highest carbon content, the fewest impurities, and the highest calorific content of all types of coal. Anthracite has advantage characteristics, such as coal-low sulfur, high carbon content and minimal impurities, etc. Anthracite is a critical input in the production of Energy Industry, chemical industry, cement industry and steel industry.

Anthracite is a highly carbonated form of clean-burning coal that is different from the more commonly known bituminous (soft) coal. Anthracite is primarily mined on the surface by retrieving left-over coal from abandoned, previously deep mined underground sites. Huge shovel-like machines, called drag-lines, dig up coal that is buried in the walls and ceilings of the abandoned tunnels. As to the anthracite downstream application, energy industry is its largest downstream market, which shares 37.2% of the consumption in 2017.

Over the next five years, LPI(LP Information) projects that Anthracite Coal will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
