**The report requires updating with new data and is sent in 48 hours after order is placed.**

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Anthracite Filters market for 2018-2023.

In our report, we discussed the anthracite filter media, which are filtration materials for turbidity and SS removal. Since the specific gravity is lighter than that of Filter Sand, it is much used in combination with Filter Sand in dual-media filtration, to consist reverse grain layers after backwashing. In addition, because of high content carbon of this product, it has high resistance to various chemicals and high physical strength so that it is widely used for city and industrial water purification.
China, USA and Europe are the main production base of anthracite filters, key manufacturers: Carbon Sales, Anthracite Filter Media, Xylem, CEI, Northern Filter Media, Red Flint Sand, Prominent Systems, EGL Group, Western Carbons, Aqualat, CAS, Filcom, Hatenboer-Water, Qingxin, Taihe, Fuquan are all located here. The production of anthracite filters was 1280.9 K MT in 2014, of which 60.32% is produced in China, USA and Europe. China mainly supplies low-end products while USA and Europe are capable of supplying more high-quality products.
Anthracite filters industry has developed for many years, and formed a substantial market in many developed countries. However, in developing countries such as China, the local market is still far from mature. And with the rising demand for product quality, many enterprises have to invest more funds on their R&D project.
The downstream water treatment market is a large and stable market nowadays, and the global anthracite filters market will keep a steady growth in a long time.
Over the next five years, LPI(LP Information) projects that Anthracite Filters will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in
