In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Anti-infective Ophthalmic market for 2018-2023.

Ophthalmic anti-infectives are anti-infectives contained in a product formulated especially to be instilled or applied in the eye or eyes. Ophthalmic anti-infectives include eyedrops, gels or ointments. Anti-infectives are drugs that can either kill an infectious agent or inhibit it from spreading. Anti-infectives include antibiotics and antibacterials, antifungals, antivirals and antiprotozoals.

In terms of region, the global ophthalmic anti-infective market can be segmented into North America, Europe, Asia Pacific, Latin America, and Middle East & Africa. North America is expected to dominate the global ophthalmic anti-infective market due to availability of advanced drug formulations in the region. Awareness among people about diseases is also a major factor boosting the market in the region. The ophthalmic anti-infective market in Asia Pacific is anticipated to expand at a rapid pace due to increase in incidence of eye infection in the region. Lack of awareness about diseases and unavailability of advanced medication and formulations in underdeveloped countries, such as Lebanon, Syria, Cyprus, Turkey, and Iraq are likely to restrain the growth of the ophthalmic anti-infective market in Middle East & Africa.

Over the next five years, LPI(LP Information) projects that Anti-infective Ophthalmic will register a xx% CAGR in terms of revenue, reach US\$ 1410 million by 2023, from US\$ 1410 million in 2017.
