## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Antimicrobial Coating market for 2018-2023.

Antimicrobial coatings are coatings that contain antimicrobial agents in them. Like other coatings, these coatings not only enhance appearance, durability, and corrosion resistance property but also protect the coated surface from harmful microbes that cause disease. The manufacture of these coatings involves the addition of biocides to the formulation. Various bacterial and fungal inhibitors, such as silver and copper are commonly used in their production. These coatings either inhibit the bacterial growth or kill the bacteria which come in contact with them.

Antibacterial coatings are overlay materials that restrict the growth of bacteria on the implants surface. Medical implants which are inserted internally have the potential to introduce bacterial infections; therefore, the need to replace the implants arises. Frequent replacement of implants would lead to excessive discomfort among patients; therefore, to prevent the bacterial infection, the medical implants are treated with antibacterial agents, which are biocompatible, bio-stable, and nontoxic.

Medical is the biggest end-use application of antimicrobial coatings. These are extensively used in the medical / healthcare industry for applications such as, catheters, medical devices, medical electronics, and trays among others. The demand for antimicrobial coatings is increasing due to the rising demand from North America and Europe, where governments are creating greater awareness about antimicrobial coatings in the medical / healthcare industries. Governments in all the countries are focusing on the requirement of decreasing hospital acquired infections, which is a major concern in recent years. Stringent regulations have been imposed by governmental

agencies to reduce these infections, which require the use of antimicrobial coatings.

North America was the largest regional market for antimicrobial coatings followed by Europe. Owing to high living standards in U.S.A, antimicrobial coatings market has been witnessing strong growth over the past few years and trend is expected to continue over the forecast period. Asia Pacific market is anticipated to witness rapid growth over the forecast period.

Over the next five years, LPI(LP Information) projects that Antimicrobial Coating will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
