The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Artificial Pancreas Devices Systems market for 2018-2023.

The Artificial Pancreas Device System is a system of devices that closely mimics the glucose regulating function of a healthy pancreas.

Most Artificial Pancreas Device Systems consists of three types of devices already familiar to many people with diabetes: a continuous glucose monitoring system (CGM) and an insulin infusion pump. A blood glucose device (such as a glucose meter) is used to calibrate the CGM.

A computer-controlled algorithm connects the CGM and insulin infusion pump to allow continuous communication between the two devices. Sometimes an artificial pancreas device system is referred to as a "closed-loop" system, an "automated insulin delivery" system, or an "autonomous system for glycemic control."

An Artificial Pancreas Device System will not only monitors glucose levels in the body but also automatically adjusts the delivery of insulin to reduce high blood glucose levels (hyperglycemia) and minimize the incidence of low blood glucose (hypoglycemia) with little or no input from the patient.

The classification of artificial pancreas devices systems includes threshold suspended device systems and hybrid closed-loop APDS, and the proportion of artificial pancreas devices systems in 2017 is about 60%, and the proportion is in decreasing trend from

2013 to 2017.

Artificial pancreas devices systems are widely used in hospital and clinic. The most proportion of artificial pancreas devices systems is in hospital, and the proportion in 2017 is about 59%.

North America is the largest consumption place, with a consumption market share nearly 54% in 2017. Following North America, Europe is the second largest consumption place with the consumption market share of 35%.

Over the next five years, LPI(LP Information) projects that Artificial Pancreas Devices Systems will register a 13.8% CAGR in terms of revenue, reach US\$ 120 million by 2023, from US\$ 56 million in 2017.
