Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Auto Brake Fluid market for 2018-2023.

Auto brake fluid is a type of hydraulic fluid used in hydraulic brake and hydraulic clutch applications in automobiles, motorcycles, light trucks, and some bicycles. It is used to transfer force into pressure, and to amplify braking force.

The function of auto brake fluid is to provide an incompressible medium to transmit the driver's foot pressure on the brake pedal through the master cylinder(s) to the calipers in order to clamp the friction material against the discs. The foot pressure is multiplied by the mechanical pedal ratio and the hydraulic ratio of the master cylinders, booster (if used) and caliper piston(s).

As international economic situation is complicated, in the next few years there will be many uncertainties although. Due to the government's policy and the high production of auto brake fluid in the international market, the current demand for auto brake fluid product is relatively high in the mature market, such as EU, US and China.

In 2014, the global production of the auto brake fluid reaches over 229910 MT; the growth rate is around 6.5% during the last five years. And we estimate the growth rate will be stable in the following years.

Castrol, Cosan, Total and BASF are major manufacturers of auto brake fluid, and these three players occupied over 30% market share in 2014.

Over the next five years, LPI(LP Information) projects that Auto Brake Fluid will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
