Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Auto Relay market for 2018-2023.

Auto Relays are electrically operated switches used for automotive applications.

Relays are used where it is necessary to control a circuit by a low-power signal (with complete electrical isolation between control and controlled circuits), or where several circuits must be controlled by one signal.

Auto Relays of different sizes are found in every type of land or sea vehicle. They are often used to enable a low amperage circuit to switch a higher amperage circuit on or off. An example would be turning headlights on. Auto Relays also allow items to switch at the same time by using a single output, therefore allowing one to simultaneously open and/or close continuity on multiple items. Average relay demand of per vehicle is about 20.

Over the next five years, LPI(LP Information) projects that Auto Relay will register a 1.8% CAGR in terms of revenue, reach US\$ 4210 million by 2023, from US\$ 3850 million in 2017.
