In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automated External Defibrillator (AED) market for 2018-2023.

Automated External Defibrillator (AED) is a portable electronic device that automatically diagnoses the life-threatening cardiac arrhythmias of ventricular fibrillation and ventricular tachycardia in a patient, and is able to treat them through defibrillation, the application of electrical therapy which stops the arrhythmia, allowing the heart to reestablish an effective rhythm.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.

For Automated External Defibrillator product demand market there is also a certain space, but basically showing the scarcity of high-end products, there is a large market demand for high-end products to seize market share of imports acts.

Although sales of Automated External Defibrillator brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Automated External Defibrillator field.

Over the next five years, LPI(LP Information) projects that Automated External Defibrillator (AED) will register a 5.4% CAGR in terms of revenue, reach US\$ 930 million by 2023, from US\$ 680 million in 2017.
