Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automated Teller Machine market for 2018-2023.

An automated teller machine, or an ATM, is a cash vending machine that is operated by financial institutions and allows customers to perform financial transactions without the need for a human cashier. With financial institutions encouraging the customers not to access the banks for any transactions, the demand for off-site banking implementation has increased. ATM is one part of the off-site banking trend and is anticipated to gain widespread traction owing to the integration of mobile banking and marketing with self-service channels.

In this industry research study, the analysts have estimated factors such as the increasing deployment of ATMs in off-site terminals to aid in the growth of this market during the predicted period. Moreover, the deployment of new off-site ATMs in the rural and semi-urban sites will help in reducing the cost associated with the migrating transaction from the tellers. Also, with the deployment of more ATMs, the number of customers is expected to increase significantly, which will boost ATM use. Furthermore, an increasing number of ATMs are deployed in busy locations that include petrol pumps, retail malls, and high traffic areas.

Over the next five years, LPI(LP Information) projects that Automated Teller Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
