## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automatic Generation Control market for 2018-2023.

automatic generation control (AGC) is a system for adjusting the power output of multiple generators at different power plants, in response to changes in the load. Since a power grid requires that generation and load closely balance moment by moment, frequent adjustments to the output of generators are necessary.

The rise in integration of power resources will be one of the major trends that will gain traction in this market. Realizing the need to reduce GHG emissions, countries around the globe have started reducing their dependency on fossil fuel and started focusing on cleaner fuel sources such as nuclear and renewable energy. This addition of new resources will make electrical grids more complex and multidimensional. And as a result, companies will start using power control systems such as AGC which help in ensuring the stability of power grids.

Over the next five years, LPI(LP Information) projects that Automatic Generation Control will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
