The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automatic Positioning Balancing Machine market for 2018-2023.

A balancing machine is a measuring tool used for balancing rotating machine parts such as rotors for electric motors, fans, turbines, disc brakes, disc drives, propellers and pumps. The machine usually consists of two rigid pedestals, with suspension and bearings on top supporting a mounting platform. The unit under test is bolted to the platform and is rotated either with a belt-, air-, or end-drive. As the part is rotated, the vibration in the suspension is detected with sensors and that information is used to determine the amount of unbalance in the part. Along with phase information, the machine can determine how much and where to add or remove weights to balance the part.

The Automatic Positioning Balancing Machine adds Automatic Positioning functional to the Balancing Machine, which can achieve accurate automatic positioning. It will automatically stop after measurement is qualified, otherwise it will stop at the unbalance point, avoid manual looking for angles, thereby improve working efficiency.

Europe has the largest global sales quantity and manufacturers in Automatic Positioning Balancing Machine market, while the United States is the second sales volume market for Automatic Positioning Balancing Machine in 2017.

In the industry, Schenck profits most in 2017 and recent years, while DSK and Shimadzu ranked 2 and 3. The market share of them is 46.27%, 11.32% and 10.05% in 2017. The gap of market share is keep on enlarged due to different strategy.

Nowadays, there are two mainly types of Automatic Positioning Balancing Machine,

including Magnetic Automatic Positioning Balancing Machine and Non-magnetic Automatic Positioning Balancing Machine. And Magnetic Automatic Positioning Balancing Machine is the main type for Automatic Positioning Balancing Machine, and the Magnetic Automatic Positioning Balancing Machine reached a sales volume of approximately 1624 Unit in 2017, with 55.81% of global sales volume.

Automatic Positioning Balancing Machine technology is much mature now, and new enterprises can not surpass existing famous brands on reputation or design in the short term. So, the study group recommends the new entrants need to be considered carefully before enter into this field.

Over the next five years, LPI(LP Information) projects that Automatic Positioning Balancing Machine will register a 3.5% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$ 110 million in 2017.
