## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automation Industrial Monitors market for 2018-2023.

Industrial monitors are widely used in a variety of industrial applications such as smart factories, mining operations, marine ports, food and beverage, oil rigs, and energy management. The ruggedness of industrial display differentiates these monitors from residential and commercial monitors. Industrial monitors are usually made of rugged materials to withstand the impact of harsh environments in both indoor and outdoor applications.

According to the report, the rising complexity of industrial process has led to the evolution of SCADA and Distributed Control System (DCS)-based systems for factory automation in the past few years. SCADA and DC-based systems are widely employed in a variety of industries such as oil and gas, mining, power, and automotive to remotely control the physical processes and therefore, require display monitors to survey and control the process parameters continuously. Hence, the industrial monitors market is expected to increase along with the deployment of SCADA during the forecast period. Further, the report states that the demand for any industrial products is highly dependent on the macroeconomic business cycle. For example, during 2014-2015, the decline in crude oil prices by 50% created a contraction in investments in the oil and gas and allied industries, resulting in less demand for industrial monitors. In addition, due to the economic slowdown, many manufacturers faced disruption in payments, thereby, affecting the overall industry's ecosystem and its operations.

Over the next five years, LPI(LP Information) projects that Automation Industrial

Monitors will register a 2.6% CAGR in terms of revenue, reach US\$ 340 million by 2023, from US\$ 300 million in 2017.
