Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automation Solutions in Oil and Gas market for 2018-2023.

In the short term, midstream companies are minimally impacted due to low energy prices and a decline in the price of oil. Since contracts in the oil and gas industry are fee-based, most contracts are finalized at fixed rates and contain minimum volume commitments or guarantees of minimum ROI. The augmented implementation of automation solutions, such as SCADA and DCS, to overcome issues like the unstable flow of fluids in pipelines and risers in the midstream infrastructure will lead to the growth of this market over the next four years.

Another trend influencing this market's growth is the availability of automation solutions on the cloud. In the oil and gas sector, automation solutions are likely to be the next logical step in the evolution of automation technology. By shifting towards cloud-based environments, oil and gas companies can significantly reduce costs, achieve greater flexibility, and enhance functionality. A cloud-based platform shifts the task of maintaining data from the oil and gas service companies to the cloud service provider and eliminates the expenses incurred and problems related to the hardware layer of IT infrastructure for companies.

Over the next five years, LPI(LP Information) projects that Automation Solutions in Oil and Gas will register a 1.0% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ 76900 million in 2017.
