The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Active Aerodynamics System market for 2018-2023.

The growing adoption of electric vehicles (EVs) will drive the growth prospects for the global automotive active aerodynamics system market in the forthcoming years. Some of the major factors responsible for the growing adoption of EVs in the automotive market is the increasing demand for vehicles from daily commuters and long-distance travelers and stringent emission norms from the government. Also, increasing the efficiency of EVs by improving the battery technology such as the development of lithium-ion batteries will further accelerate the dependence of people on EVs.

The increasing use of the advanced active grille shutter system to reduce CO2 emission from vehicles will drive the growth prospects for the global automotive active aerodynamics system market until the end of 2021. Vehicles with the active grille system consume less fuel than vehicles without the active grille system because the engine in a vehicle using modern active grille system reaches the most efficient operating temperature within a short span of time.

Over the next five years, LPI(LP Information) projects that Automotive Active Aerodynamics System will register a 10.5% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
