Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Adaptive Emergency Brake Lights market for 2018-2023.

Adaptive brake lights alert drivers of the emergency brake being activated in the vehicle in front of them. The flashing of the brake lights indicates to the car behind that the emergency brakes are being activated. The brake lights are automatically activated to flash several times with different illuminating levels when the vehicle undergoes an emergency brake while traveling at a speed of over 60 km/h. The intensity of the brake lights could be enhanced through the activation of additional lights along with the car's existing brake lights upon emergency braking.

This industry research report identifies the rise in adoption of electronic components by automotive manufacturers to differentiate their products to be one of the major factors that will have a positive impact on the growth of this market in the coming years. Intense competition in the automotive industry is inducing companies to improve various parameters including safety, performance, stability, and comfort by replacing the conventional mechanical components with automotive electronics. The adaptive emergency brake lights systems have the option to be disabled or activated based on the preference of the consumer and will be one of the major components preferred by original equipment manufacturers (OEMs) to differentiate vehicle variants.

Driven by constant innovation and development in the systems' architecture and functionality, the coming years will witness a significant adoption of advanced brake lighting systems in commercial vehicles as well. The American auto component makers WABCO and ZF TRW have already developed and introduced a new technology for commercial vehicles known as evasive maneuver assist (EMA). Using radar-based

collision avoidance technology, this system identifies obstacles in the front of the vehicle and unavoidable rear-end collisions and sends alert signals to the driver in the form of audio and haptic signals. In addition to preventing collisions, the system also helps the driver to bring the vehicle to a complete stop.

Over the next five years, LPI(LP Information) projects that Automotive Adaptive Emergency Brake Lights will register a 9.1% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
