## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Airless Radial Tire market for 2018-2023.

The design of airless tires is quite apparent when the above introductory note is read. Since they do not require air pressure as a supporting element, airless tires have their other supporting structures made of polymers. These tires are available in different designs, and the type of design dictates the choice of filler material that acts as a buffering material.

The rising demand for specialized tires such as airless tire from construction, mining, and agriculture machinery will drive the growth prospects for the global automotive airless radial tire market until the end of 2021. According to the market research information, the number of investments in the mining industry is increasing due to the growing preference for metals, large and ultra large radials that are used in mining equipment and construction machinery, and other related products. Some of the major factors responsible for the growing demand for airless tires is the increasing demand for construction machines and the development of infrastructures. Also, the growing demand for agricultural equipment will drive the preference and demand for airless tires. It has been observed that the economic growth and population growth in developing nations will result in the mechanization of agricultural activities. Furthermore, with the growing focus of the government on the agricultural sector, the sales of these tires in the agricultural equipment is increasing.

Over the next five years, LPI(LP Information) projects that Automotive Airless Radial Tire will register a 6.2% CAGR in terms of revenue, reach US\$ xx million by 2023, from

US\$ xx million in 2017.
