## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Brake Booster market for 2018-2023.

The brake booster is designed to create a greater braking force from minimum pedal effort, using a difference in atmospheric pressure and the engine's manifold vacuum. It increases the pedal force 2 to 4 times depending on the size of the diaphragm. The brake booster is located between the brake pedal and the master cylinder.

The Automotive Brake Booster mainly includes single diaphragm booster and dual diaphragm booster. The single diaphragm booster occupies most part of the production. The main production base is located in China, so China is the largest production region in the world.

Currently, almost all automobiles need automotive brake booster, and the size of the market for passenger cars grew rapidly, and passenger cars has a higher frequency parts replacement, so both in OEM and after-market, the automotive brake booster used in passenger cars has growth driving factor. So the demand has a stable growth rate. The global sales of automotive brake booster in 2015 have been over 89 Million Units; the gross margin was 19.49%.

Over the next five years, LPI(LP Information) projects that Automotive Brake Booster will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
