In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Catalytic Converters market for 2018-2023.

An automotive catalytic converter is a device that uses a catalyst to convert three harmful compounds in car exhaust into harmless compounds. It is a stainless steel box mounted in the exhaust system. Inside is the auto catalyst - a ceramic or metallic substrate with an active coating incorporating chemical compounds (the washcoat) to support a combination of catalytical materials or minerals selected for their effectiveness in the required emissions reductions.

The global average price of automotive catalytic converters is in the decreasing trend, from 128.3 USD/Unit in 2011 to 121.3 USD/Unit in 2015. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of automotive catalytic converters includes three-way converter, two-way converter and other type, and the proportion of three-way converter in 2015 is about 83%.

Automotive catalytic converters are widely used in passenger vehicle and commercial vehicle. The most proportion of automotive catalytic converters is used for passenger vehicle, and the consumption proportion in 2015 is about 75%.

Over the next five years, LPI(LP Information) projects that Automotive Catalytic Converters will register a 2.8% CAGR in terms of revenue, reach US\$ 17700 million by 2023, from US\$ 15100 million in 2017.
