Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Disc Brake market for 2018-2023.

Disc Brake is a type of brake that uses calipers to squeeze pairs of pads against a disc in order to create friction that retards the rotation of a shaft, such as a vehicle axle, either to reduce its rotational speed or to hold it stationary. Hydraulic disc brakes are the most commonly used form of brake for motor vehicles but the principles of a disc brake are applicable to almost any rotating shaft.

The Disc Brake is usually made of cast iron, steel and aluminum, but in some cases may be made of composites such as reinforced carbon-carbon or ceramic matrix composites.

The main consumption regions are concentrated in the China and Europe and North America. The automotive disc brake's consumption has great relationship with the local automotive production and economic level. The developing countries have little consumption.

The import and export volume is relative small; China has the largest export ratio. Currently, the Automotive Disc Brake has a certain degree of anti-dumping phenomenon. The import specification and volume depends the local consumption.

In the future, the Automotive Disc Brake will have a good future; the price fluctuation has relationship with the raw material and models. The technology will more mature and

the monopoly phenomenon will be weakened. The application will be extensive. The consumption growth rate has continued to rise. The installation rate is higher and higher.

Over the next five years, LPI (LP Information) projects that Automotive Disc Brake will register a 2.9% CAGR in terms of revenue, reach US\$ 14,900 million by 2023, from US\$ 12,600 million in 2017.
