In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Electric Window Regulator market for 2018-2023.

A window regulator is the mechanical assembly behind a door panel that is responsible for moving a glass window up or down along a guided track. Basic window regulators which have been around since enclosed automobiles were first introduced 100 years ago are operated by a hand crank, and electric window regulators use an electric motor to do the work of moving the glass along its path.

Automotive electric window regulators are components that make it possible to lower and raise the window glass in a vehicle at will. With the rapid development of economy and people's living standards gradually improved, global demand for automobiles is increasing. As parts of automobiles, the demand of automotive electric window regulators is also increasing subsequently.

Europe is the dominate consumer in automotive electric window regulators industry. The sales volume of Europe was 82472 K Units in 2015, occupied about 31.84% of the total amount. China is the second one, with the sales volume of 79402 K Units, and the sales market share of 30.65% in 2015.

Automotive electric window regulators have many types, such as scissor regulator, cable regulator, flexible shaft regulator, single-arm regulator, etc. Among them, scissor regulator is the most widely used type, occupied about 51.85% market share in 2015, followed by cable regulator, with the market share of 33.17%.

Over the next five years, LPI(LP Information) projects that Automotive Electric Window Regulator will register a 0.7% CAGR in terms of revenue, reach US\$ 5270 million by

2023, from US\$ 5060 million in 2017.
