In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Emission Analyzer market for 2018-2023.

Automotive emission analyzer is a device that measures gas emissions of both diesel and gasoline fueled vehicles. Emission analyzer detects and displays the level of air pollutants such as carbon monoxide (CO), hydrocarbons (HC), and nitrous oxides for gasoline fueled vehicles. In case of diesel fueled vehicles the analyzer displays the opacity measurement.

As the development of automobile industry, automobile exhaust has been one of the most important problems in the world, especially in largest automobile producing countries such as China and Japan.

Developed countries in Europe and North America pay more and more attention to environment protection, and automotive emission analyzers play a necessary role to measure the exhaust pollutants. Although they are not the major automobile producing countries, the demand for automobile emission analyzer is also large and clear.

Over the next five years, LPI(LP Information) projects that Automotive Emission Analyzer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
