## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Exhaust Gas Recirculation (EGR) Systems market for 2018-2023.

Automotive exhaust gas recirculation (EGR) systems are one of the most important components in any automobile engine. It is a NO<sub>x</sub> emission control technique applicable to a wide range of diesel engines. EGR is there to reduce emissions. It does this by rerouting some of the exhaust gases coming from the engine back into the combustion chambers in the engine.

According to the report, one of the key drivers of the market is the regulation of NO<sub>x</sub> emission from diesel and gasoline engines. To comply with rigorous NO<sub>x</sub> emission regulations, a combination of NO<sub>x</sub> reduction catalysts and EGR systems is used. With the rapid development of China's economy, environmental pollution has become a major problem restricting China to build a harmonious society. Chinese car ownership will continue to average annual growth rate of 9%, reduce the pollution caused by vehicle emissions, EGR technology is an effective way to support the engine has reached the Euro IV emission standards above.

In China, the automotive exhaust gas recirculation (EGR) systems industry started relatively late. Most enterprise has small-scale. Due to the limited level of technology, most enterprise manufactures part of the EGR system components in accordance with the requirements of the downstream business.

Over the next five years, LPI(LP Information) projects that Automotive Exhaust Gas Recirculation (EGR) Systems will register a xx% CAGR in terms of revenue, reach US\$

xx million by 2023, from US\$ xx million in 2017.
