In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Hub Bearing (Automotive Wheel Bearing) market for 2018-2023.

This report studies the Automotive Hub Bearing market. Automotive Hub Bearing perform two very important jobs in a vehicle's suspension. The wheel bearing allows the wheels to rotate with minimal function, and they also support the vehicle's weight. To be able to do both of these jobs, the bearings must be in near perfect condition. The seals must also be leak free to keep the lubricant inside the bearings and contaminants out. In an average sedan that weighs around 3,400 lb, each pair of front Hub Bearing, as well as the rear wheel or axle bearings, each support 850 pounds. This all depends on the front to rear weight distribution of the vehicle. It's a lot of weight that needs to be supported over tens of thousands of miles.

Due to the high sales of global automotive market, and the increasing demand for fuel efficient, the current demand for automotive hub bearings product is relatively high worldwide. Meanwhile, the demand from China market was much higher due to the rapid development of Chinese automotive market.

Because there are giant multinational players like SKF, Schaeffler, NTN and NSK in this market, the concentration of global automotive hub bearings market is relatively high. Among the top automotive hub bearings players, SKF, Schaeffler, NTN and NSK are the big five players in the world, and these four companies occupied about 56% revenue market share totally in 2017, Meanwhile, there are hundreds of small scale manufacturers all over the world.

Over the next five years, LPI(LP Information) projects that Automotive Hub Bearing (Automotive Wheel Bearing) will register a 6.4% CAGR in terms of revenue, reach US\$ 9570 million by 2023, from US\$ 6590 million in 2017.
