In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Lead Acid Battery market for 2018-2023.

The lead-acid battery is a rechargeable battery technology available in the market, which is generally used in numerous applications such as motive, automotive, and stationary applications. These batteries are utilized in automotive applications majorly due to their cranking property, which provides the power within a short span.

The passenger cars segment dominated the global automotive lead acid batteries market in 2017, followed by the LCVs & HCV's. The passenger cars segment is projected to witness highest growth from 2018 to 2023, due to the increasing demand for the batteries in starting, lighting, and ignition.

Flooded battery was the largest segment of the automotive lead acid batteries market in 2017. It is the most common type of battery, and is used in a wide range of automotive applications. Enhanced flooded batteries is projected to be the fastest-growing segment between 2018 and 2023. This growth can be attributed to long life, and cost and environmental benefits associated with lead acid batteries.

Over the next five years, LPI(LP Information) projects that Automotive Lead Acid Battery will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
