The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Lidar Sensor market for 2018-2023.

Lidar (also called LIDAR, LiDAR, and LADAR) is a surveying method that measures distance to a target by illuminating that target with a pulsed laser light, and measuring the reflected pulses with a sensor. Differences in laser return times and wavelengths can then be used to make digital 3D-representations of the target. The name lidar, sometimes considered an acronym of Light Detection and Ranging (sometimes Light Imaging, Detection, And Ranging), was originally a portmanteau of light and radar. The classification of Automotive Lidar Sensor includes Mechanical/Scanning Lidar, Solid State Lidar, and the proportion of Mechanical/Scanning Lidar in 2016 is about 92%, and the proportion is in fluctuation trend from 2012 to 2016.

North America is the largest supplier of Automotive Lidar Sensor, with a production market share nearly 84% in 2016. Europe is the second largest supplier of Automotive Lidar Sensor, enjoying production market share nearly 11% in 2016.

North America is the largest consumption place, with a consumption market share nearly 28% in 2016. Following China, Europe is the second largest consumption place with the consumption market share of 22%.

Over the next five years, LPI(LP Information) projects that Automotive Lidar Sensor will register a 27.5% CAGR in terms of revenue, reach US\$ 160 million by 2023, from US\$ 38 million in 2017.
