The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Speed Encoder market for 2018-2023.

Encoders are sensors that generate digital signals in response to movement, it has characteristics such as high-precision, large range measurement, fast response, digitized output; it is small size, light weight, compact, easy to install, simple to maintain, work reliably.

According to the measurement method, there are three types: linear encoders, angular encoders, rotary encoders, encoder used in the automobile industry for measuring wheel speed is rotary encoder.

At present in the foreign industrial developed countries, the automotive speed encoder industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the United States, Europe, Japan, etc. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost is a competitive disadvantage, as the Chinese automotive speed encoder production enterprise technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase.

In Chinese market, the market share of high-end and middle-end product is controlled by foreign companies, Chinese manufacturers currently can only compete in the low-end product level with low price marketing strategy. We expect that the situation will not change in short future.

Over the next five years, LPI(LP Information) projects that Automotive Speed Encoder will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
