In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Transmission market for 2018-2023.

Auto Transmissions is a machine that consists of a power source and a power transmission system, which provides controlled application of the power. Often the term transmission refers simply to the gearbox that uses gears and gear trains to provide speed and torque conversions from a rotating power source to another device.

China is the largest consumer of Automotive Transmission and is expected to retain the higher growth rate during the next five years due to strong growth in automotive industry. China have witnessed a major chunk of the production and consumption of Automotive Transmission in the Asia Pacific region. Actually, that is why manufacturers have several plants, usually close to aimed demand market.

The import and export business of this industry is not frequent. The main reason lies in that many international manufacturers expand their business through building factories or investments in targeted markets. Also, many major players have built up plants in developing countries, like India and Thailand.

This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdevelopment regions that have a large population and fast economic growth, the need of Automotive Transmission starch will increase.

Over the next five years, LPI(LP Information) projects that Automotive Transmission will register a 2.6% CAGR in terms of revenue, reach US\$ 121200 million by 2023, from

US\$ 103800 million in 2017.
