## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Automotive Turbochargers market for 2018-2023.

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system.

Europe is expected to be the largest market for Automotive Turbocharger during the forecast period. The Automotive Turbocharger market in this region is primarily driven by the growing demand for emission regulations and energy saving.

Over the next five years, LPI(LP Information) projects that Automotive Turbochargers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
