## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Axle & Shaft for Pickup and Trucks market for 2018-2023.

Axle & Shaft for Pickup and Trucks is a mechanical part that translates the torque generated by a vehicle's engine into usable motive force to propel the vehicle. Axle & Shaft for Pickup and Trucks can be divided into propeller shaft and half shaft. The propeller shaft deliver power from an engine/transmission to the other end of the vehicle before it goes to the wheels. It is used on front engine rear wheel drive and most 4 wheel drive vehicles it couples the transmission with the rear differential. There is also a pair of shorter drive shafts often used to carry torque from a transaxle to the wheels. It is used in all kinds of vehicles and the number of half shafts varied with the drive mode. For the fierce competition between suppliers, the price and gross margin is expected to decrease further.

Half Shaft production is bigger than Propeller Shaft, and we predict that in the following five years, the half Shaft production will continue to be bigger than Propeller Shaft, the Half Shaft production value is also bigger than Propeller Shaft. Propeller Shaft price is bigger than the price of Half Shaft. The sales of Axle & Shaft in the truck applications is bigger than Pickup.

Over the next five years, LPI(LP Information) projects that Axle & Shaft for Pickup and Trucks will register a 1.4% CAGR in terms of revenue, reach US\$ 3650 million by 2023, from US\$ 3360 million in 2017.
