In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Banknote-Printing Machine market for 2018-2023.

Banknote-Printing Machine is a machine used to print paper money. The banknote paper production process includes: cutting, defibering, cleaning, mashing, mixing, paper marking, cutting and counting. The banknote printing production process includes: original drawing, original plating, plate-making, printing, serial number printing, cutting, inspection/finishing, wrapping and completion.

Banknotes must be aesthetically pleasing and recognizable by consumers. They must embody both tradition and innovation, be durable and machine readable, and offer reliable protection against counterfeiting. Some of the significant changes going forward will likely be the increased use of polymer substrates along with security features such as embedded threads that can incorporate color shifting, holographic images, de-metallization, UV luminescence and machine-readable properties as well as windows, foils, microlenticulars, optically variable inks, and UV fluorescent and iridescent printed features.

Banknote printing has traditionally been carried out by governments or central banks. However, with the development of financial markets and the consolidation of specialized companies in banknote production, a number of central banks have invited private sector to participate in this function. Banknote printers can be classified into the following categories on the basis of their structural constitution.

Over the next five years, LPI(LP Information) projects that Banknote-Printing Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$
