In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Barytes market for 2018-2023.

Baryte or barite is a mineral consisting of barium sulfate. The baryte group consists of baryte, celestine, anglesite and anhydrite. Baryte is generally white or colorless, and is the main source of barium. Baryte and celestine form a solid solution (Ba,Sr)SO<sub>4</sub>.

The increasing demand for Baryte drives the growth of market especially for oil and gas industry. The increase in deep water drilling activities is one of the primary drivers for market growth. Brazil, Gulf of Mexico, and West Africa are likely to witness largest growth in the deepwater market backed by the rising deepwater hydrocarbon discoveries and the decreasing production from onshore and shallow water basins in these countries. These factors accelerate the demand for barytes in the oil and gas industry. North America to retain its position throughout the forecast period and attributed the constant increase in oil and gas drilling activities for this. The U.S. is projected to lead the North America barite market over the forthcoming years. Asia Pacific is also anticipated to surface as a promising market for barite in the years to come.

Over the next five years, LPI(LP Information) projects that Barytes will register a 3.9% CAGR in terms of revenue, reach US\$ 1770 million by 2023, from US\$ 1410 million in 2017.
