Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Battery for Energy Storage in Telecom market for 2018-2023.

Uninterrupted power supply can be achieved through grid or diesel generator sets. However, growing concerns about environmental and climate change issues have fueled the need for telecom towers that utilize clean energy. Renewable power sources such as solar and wind are used to power these towers. In case of grid failure, batteries are used to provide backup as standby power to telecom towers.

The rise in telecom subscriptions worldwide has led to increased number of telecom tower installations. This has led to rising consumption of diesel. An overall estimate of 80% telecom towers operate on diesel generators, thus resulting in high-energy costs. Therefore, using batteries in place of diesel generators help operators reduce costs related to fuel transport and generator maintenance. China has one of the world's largest telecom sector. As of 2014, the country had more than 1.3 million telecom subscriptions, and the count is expected to double by the end of 2017. An increase in the demand for migration to 4G from 2G and 3G is expected to prompt the telecom operators to install more towers in the region. It is expected to contribute directly towards the consumption of batteries through 2019.

Over the next five years, LPI(LP Information) projects that Battery for Energy Storage in Telecom will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
