The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Battery for UPS market for 2018-2023. UPS is an electrical device that provides instantaneous electrical backup from batteries during power outages.

The latest trend gaining momentum in the market is use of Li-ion based UPS systems. VRLA batteries are the most preferred batteries for UPS systems in data centers to provide backup power during outages. One of the major drivers for this market is increase in data center construction. The growth in the construction of data centers is facilitated by the increased demand for cloud-based service offerings and the need to increase the digitalization in many countries. One of the major factors hindering the growth of this market is UPS battery failure. Many data centers face the major problem of battery failure in UPS systems. In many data center outages, the battery is found to be a root cause, accounting for around 60% of such outages. Batteries are a low-tech component that support data center infrastructure during unplanned outages. Most data centers suffer power outages that last for a few seconds; however, severe damage can ensue should the batteries in the UPS infrastructure fail.

Over the next five years, LPI(LP Information) projects that Battery for UPS will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
