The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Battery Electric Vehicles market for 2018-2023.

A battery electric vehicle (BEV), or all-electric vehicle is a type of electric vehicle (EV) that uses chemical energy stored in rechargeable battery packs. BEVs use electric motors and motor controllers instead of internal combustion engines (ICEs) for propulsion. They derive all power from battery packs and thus have no internal combustion engine, fuel cell, or fuel tank. BEVs include - but are not limited to - motorcycles, bicycles, scooters, skateboards, rail cars, watercraft, forklifts, buses, trucks, and cars.

Growing Awareness about vehicle emission reduction, government support, technical advancement and low cost are main factors contributing to the growth of market. As one of the linchpins of the EV industry, battery technology has been the focus of sustained innovation. Initiatives to develop low- cost, fast charging battery technologies that support long range use looked set to yield promising results. The Asia-Pacific (APAC) region dominated the global electric vehicles battery market by value and accounted for a share of 76.5% in 2016. The APAC automotive electric vehicles battery market is majorly dominated by the South Asian countries comprising of some of the biggest automotive producers in the world.

Over the next five years, LPI(LP Information) projects that Battery Electric Vehicles will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
