## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Battery Management IC market for 2018-2023.

Battery Management ICs includes Battery monitoring fuel gauge ICs and Battery chargers. Battery monitoring fuel gauge ICs combining a small footprint with outstanding measurement accuracy (voltage, current and temperature) and extremely low power consumption to increase battery runtime and lifespan in mobile phones, multimedia players, digital cameras, and other space-constrained portable devices. Battery chargers that offer charge currents from as little as 200 mA up to 1.2 A and that can be used for any rechargeable chemistry lithium-ion battery.

The increasing popularity of electric vehicles is one of the primary drivers for market growth. Improvements in battery technologies have led to recent modernizations in the automotive industry and the development of new-age electric and hybrid electric vehicles. The significant growth in demand for electric vehicles has prompted many automobile manufacturers to invest money in the market, in turn, fueling the demand for electric vehicle batteries. APAC led the global battery management IC market during 2016 and is expected to continue the lead over the following year. This mainly attributed to a rise in applications using battery management ICs mainly in the wearable electronics and automotive sectors.

Over the next five years, LPI(LP Information) projects that Battery Management IC will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
