In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global BCD Power IC market for 2018-2023.

BCD technology is a combination of bipolar components and CMOS and DMOS power transistors and is used for smart power management. It combines analog, logic, and power output stages onto a single chip.

High adoption of consumer electronic devices such as tablets, smartphones, and PCs, rapid industrialization, increasing disposable income and an upcoming and growing implementation of IoT are key drivers for BCD Power IC market. The populace's rising preference for energy-efficient devices will impel the adoption of BCD power ICs during the forecast period. In terms of geography, the APAC region dominated this market in 2017 and is envisaged to retain its dominating hold over the market until 2020 owing to increasing production of power management ICs in countries like China and Taiwan. America is expected to rise gradually because of the increasing industrialization in the region. EMEA is expected to witness an increase in its market share because of the high adoption of consumer electronic devices such as tablets, smartphones, and PCs in the region.

Over the next five years, LPI(LP Information) projects that BCD Power IC will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
