In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bilirubin Meters market for 2018-2023. Bilirubin (formerly referred to as haematoidin and discovered by Rudolf Virchow in 1847) is a yellow compound that occurs in the normal catabolic pathway that breaks down heme in vertebrates. This catabolism is a necessary process in the body's clearance of waste products that arise from the destruction of aged red blood cells. First the hemoglobin gets stripped of the heme molecule which thereafter passes through various processes of porphyrin catabolism, depending on the part of the body in which the breakdown occurs. For example, the molecules excreted in the urine differ from those in the faeces. The production of biliverdin from heme is the first major step in the catabolic pathway, after which the enzyme biliverdin reductase performs the second step, producing bilirubin from biliverdin.

Bilirubin Meters measure the bilirubin level in patient body.

The classification of bilirubin meters includes transcutaneous and bench-top, and the proportion of transcutaneous in 2016 is about 87%, and the proportion is in increasing trend from 2012 to 2016.

Bilirubin meters are widely used in hospital, clinic and other field. The most proportion of bilirubin meters is used in hospital, and the consumption proportion is about 53% in 2016.

North America is the largest consumption place, with a consumption market share nearly 33% in 2016. Following North America, Europe is the second largest consumption place with the consumption market share of 28%.

Market competition is intense. Philips, Drager, Konica Minolta, etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers;
