Binders are used to hold or bind materials close enough so that they form a cohesive unit; binders also act as adhesives. Binder excipients are used during medicine or drug formulations. They are used to form granules of medical powders, which under compaction can take various shapes to form a compact mass, known as tablets. The growing demand for various pharmaceutical products on account of ageing population and rising cases of chronic diseases acts as the major factor driving the binder excipients market worldwide. The recent patent expiries of a number of drugs is further projected to provide a positive thrust to the demand for binder excipients in generic drug manufacturing. Some of the other factors facilitating the market growth are advancements in nanotechnology, emergence of new excipients and rising demand for functionality excipients. The US and Germany accounted for the major shares because of the presence of a large number of excipient manufacturers. Pharmaceutical companies are the major consumers of binder excipients.

Over the next five years, LPI(LP Information) projects that Binders Excipients will register a 5.1% CAGR in terms of revenue, reach US\$ 1680 million by 2023, from US\$ 1250 million in 2017.
