Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio Alcohol market for 2018-2023.

Bio alcohols are sustainable organic chemicals that possess important physiological properties through the fermentation of sugar or cellulose. Bio-alcohols are environment-friendly and mainly used in transportation as an alternative to gasoline.

A key driver of the global bio alcohol market is the imminent shortage of fossil fuels and the growing pollution problems their consumption is creating. The use of bio alcohol will help control the greenhouse effect to a major extent, reducing various regions' carbon footprint. Apart from this, the power potential of bio alcohols is also high, making it a highly feasible class of fuels to be used at large scales. From a regional perspective, the bio alcohol market for developed economies in Europe and North America has always been significant. The future of this market will, however, be directed largely by the emerging economies, owing to the high potential they hold in terms of production and demand for bio alcohol.

Over the next five years, LPI(LP Information) projects that Bio Alcohol will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
