In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio-based PET market for 2018-2023. Bio-based PET is a biomass-derived fully recyclable, biodegradable, compostable, and renewable bioplastic material. The material is composed of 30% plant-derived ethanol glycol and 70% fossil-derived terephthalic acid (TPA).

First of all, the reason for growth of Bio based PET market is that bioplastics, increasing research and development (R&D) activities by key players in the packaging industry, and rising environmental issues caused by synthetic PET products. Second growing concerns regarding greenhouse gasses coupled with the emergence of bioplastics as an alternative in the packaging and automotive industry are expected to play a major role in driving growth in the near future. Furthermore, increasing importance of sustainable packaging, especially in China and India, is expected to have a positive impact on market demand over the few years.

Over the next five years, LPI(LP Information) projects that Bio-based PET will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
