Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio-based Platform Chemicals market for 2018-2023.

Platform chemicals represent a group of twelve (one not commercialized yet) building block chemicals that can be produced from sugars via biological conversions. Increasing acceptance of bio-based platform chemicals in industries, stringent government guidelines on conventional petroleum based chemicals and preference towards environmental friendly applications by consumers are main drivers for Bio-based Platform Chemicals market. The evolution of bio-refineries has driven the development of bio-based platform chemicals as an alternative to petrochemicals. Due to increasing government concerns regarding health, the environment and limited fossil resources, there is a growing interest in using sustainable technologies to produce chemicals, plastics, and other products from renewable resources. The bio-based platform chemicals offer great potential for decarbonizing everyday products, allowing everything from running shoe soles to plastics and car parts, to become bio-based. These trends are successful in creating a huge demand for bio-based platform chemicals market. Though North America is the largest regional market for global bio-based platform chemicals market, Asia-Pacific is also an equally important market as it represents the second largest and regional market with highest growth rate during the forecast period.

Over the next five years, LPI(LP Information) projects that Bio-based Platform Chemicals will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
