In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio-Composites market for 2018-2023.

Biocomposite is a composite material formed by a matrix and a reinforcement of natural fibers.

High growth of bio composites market is owing to the stringent regulations imposed by government on the use of plastics globally, as they are non-biodegradable. Moreover, the increasing preference of bio-composites over plastic composites as they are safe to handle in comparison to glass fibres coupled with the widespread adoption of bio-composites as they can be easily recycled or biodegraded, is expected to drive the market during the forecast period.

Over the next five years, LPI(LP Information) projects that Bio-Composites will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
