## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio-decontamination Equipment market for 2018-2023.

HPV is well recognized as a bio-decontamination agent due to its broad biological efficacy and can quickly deactivate microorganisms much more effectively than traditional decontamination methods such as formaldehyde. HPV has been tested on many individual microorganisms and classes of organisms successfully and has excellent material compatibility. HPV technology enables clients to leave computer equipment or any other devices in the room during the bio-decontamination process, unlike with other disinfection regimes, which can cause equipment damage. HPV decontamination systems operate at room temperature with relative humidity, without the need for significantly reduced humidity, unlike with traditional systems.

The Bio-decontamination Equipment market is very concerted market; the revenue of top nine manufacturers accounts about 80% of the total revenue in 2017. The high-end products mainly come from USA and Europe.

The leading manufactures mainly are STERIS Life Science, Bioquell, Fedegari Group, TOMI Environmental Solutions and JCE Biotechnology. STERIS Life Science is the largest manufacturer; its revenue of global market exceeds 38% in 2017.

Geographically, the global Bio-decontamination Equipment market has been segmented into North America, Europe, China, Asia (ex. China) and RoW. The North America held the largest share in the global market, its revenue of global market exceeds 47% in 2017. The next is Europe.

Over the next five years, LPI(LP Information) projects that Bio-decontamination

Equipment will register a 5.7% CAGR in terms of revenue, reach US\$ 140 million by 2023, from US\$ 100 million in 2017.
