Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio-Ketones market for 2018-2023.

Bio-ketones are a type of organic compounds which possess important physiological properties which are produced from bio-based raw materials, thereby making it environment-friendly. Bio-ketones are majorly used as solvents in the paint and coating sector, as preservatives, and in hydraulic fluids.

The increasing demand for bio-ketones drives the market. The bio PEEK product type is estimated to account for the largest market share in the global bio-ketones market. PEEK is highly used in the automotive industry as a replacement of metals as it helps in the reduction of automobile weight, which, in turn, leads to further fuel efficiency. Features, such as increase in performance and weight minimization of in-engine components this coupled with the growth in the automotive industry has made bio PEEK market take a substantial lead in the bio-ketones market. Acetone is widely used as a solvent and denaturant in the cosmetics and personal care industry. Bio acetone is used as a renewable alternative to petroleum-based acetone. Asia-Pacific dominated the bio-ketones market in 2017 due to the cheap labor and cost.

Over the next five years, LPI(LP Information) projects that Bio-Ketones will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
