## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bio Polypropylene market for 2018-2023. Biopolypropylene is a thermoplastic polymer commonly used in the packaging industry. Other uses include textiles, bottles, Rubik's cube stickers, and even polymer banknotes. Because polypropylene shares many properties with polyethylene, they are commonly employed for similar uses. Polypropylene is especially resistant to fatigue, which is ideal for mobile plastic parts. Conventional polypropylene is made from petroleum in a process which results in large amounts of green house gases. However, an alternative process has been developed which allows for its synthesis from sugar cane.

Reduce of GHG emissions, growth of the bioplastics industry, rising preference of consumers for biodegradable products, the increasing demand for innovative packaging from MNCs are main factors contributing to the growth of market. North America is one of the prominent markets for bio-based polypropylene and this is largely owing to progressive regulations for bio-based polymers implemented by the U.S. EPA. Growth of automotive, construction, packaging, and electronics sectors in North America is likely to further drive the regional market over the forecast period.

Over the next five years, LPI(LP Information) projects that Bio Polypropylene will register a 4.9% CAGR in terms of revenue, reach US\$ 45 million by 2023, from US\$ 34 million in 2017.
