In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bioactive Glass market for 2018-2023.

Bioactive glasses are a subset of inorganic bioactive materials, which are capable of reacting with physiological fluids to form tenacious bonds to bone through the formation of bone-like hydroxyapatite layers and the biological interaction of collagen with the material.

Bioactive glasses (bioactiveglass, BAG) can repair, replace and regenerate the body tissue. Also, it forms a bond of cooperation between the organization and the used material. So it is widely used in clinical repair for orthopedic repair or dental. With the development of the downstream industries, production of bioactive glasses keeps increasing in recent years.

We tend to believe this industry now is in rising period, and the consumption increasing degree will show a steady rise. On product prices, the slow downward trend in recent years will maintain in the future. Since competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Bioactive Glass will register a 7.6% CAGR in terms of revenue, reach US\$ 200 million by 2023, from US\$ 130 million in 2017.
